

Speech therapy is a therapeutic intervention that helps individuals improve their communication skills, speech production, language comprehension, and swallowing abilities. It is commonly provided by speech-language pathologists (SLPs)/speech therapists, who assess and treat speech, language, and related disorders.

Speech Therapy

How does Speech Therapy Helps Children with Autism

Enhancing Communication

Improving speech clarity, gestures, and AAC use.

Improving Social and Play Skills

Building pragmatic language, relationships, and interactive play-based communication.

Strengthening Receptive and Expressive Language

Helping understand spoken language and express needs, thoughts, and emotions clearly.

Reducing Echolalia and Encouraging Spontaneity

Minimizing repetitive speech and promoting functional, spontaneous communication.

Promoting Skill Generalization

Applying communication skills across settings and people.

Addressing Sensory and Communication Barriers

Managing sensory sensitivities to improve communication focus.

Parent Testimonials

MANIKA SHARMA
-FOUNDER Twig2tree Akademia

I've seen a student with severe ADHD make great progress at Stepping Stone, thanks to Amrita and her team's care. Their work boosted the child's confidence and school engagement. Highly recommend for similar challenges.

SHREEJOY RAY

Stepping Stones solved the challenge of finding therapists with its integrated multidisciplinary program and ABA approach, which analyzes each child's behavior. Kudos Amritha for benefiting so many families!

NARAYANAN VENKATESWARAN

I've seen a student with severe ADHD make great progress at Stepping Stone, thanks to Amrita and her team's personalized care. Their work boosted the child's confidence and school engagement. Highly recommend Stepping Stone for similar challenges.

VANAJA BOKKA

My son attended the Early Intervention program and ABA sessions at Stepping Stones Centre. The supportive staff helped improve his learning and focus significantly.
